

Name: Udhaya Kumar U
Reg no: 192424332.

1) How would you Evaluate the Security of a Windows System After identifying Open Services?

A) I would identify the Service and Versions they are necessary look for Known Vulnerabilities and Evaluate authentication Based on Exposure.

2) Which Factor would you Consider when Choosing hacking Tool For windows and why?

A) I would Consider the Assessment Objective target environment Tool reliability Accuracy Safety For the test.

3) How would you Evaluate the Security Risk Associated on Exposed RPC Service?

A) Check whether RPC is necessary, exposed, and Vulnerable to Attacks.

4) Why are windows Null Sessions Considered a Security weakness?
How would you Assess their Impact?

A) They may allow unauthorized users to obtain sensitive system information.

5) A windows Share Folder allow authorized users to Access sensitive files. Evaluate the Severity?

A) Check the sensitivity of files and level of unauthorized Access.

6) How would you distinguish between a vulnerable window service and misconfigured?

A) A vulnerable service has a security flaw; a misconfigured service has incorrect settings.

7) How would you Evaluate effectiveness of information-gathering techniques on a window target?

A) Check how much useful system information is obtained safely.

8) If a window vulnerability requires local Access you classify Impact as remotely exploitable vulnerability?

A) A remotely exploitable vulnerability is generally more serious because it needs no local Access.

Security weakness

Sensitive System

Sensitive files

99) How would you Evaluate Security Task of Unnecessary Service Running on Linux?

A) Unnecessary Services increase the Attack Surface and should be disabled or restricted.

10) Why are xhosts and hosts.equiv considered Security risks in Linux?

A) They use Trust-Based Access and may allow Unauthorized User to Login in..

11) How would you assess whether an NFS Configuration exposes Sensitive Linux Files?

A) Check Exported directories, permissions allowed hosts and authentication

12) A Linux File has incorrect Permissions allowing Unauthorized modification?

A) Unauthorized modification can compromise the integrity and Security of the System.

14) How would you Evaluate whether a Buffer Overflow Vulnerability is Practically?

A) Checks the Affected Version, Conditions, protections and possible Impact..

15) Which Factors would you Consider before Selecting an exploitation Linux Vulnerability?

A) Consider authorized, vulnerability type, System Configuration and Safety..

16) How would you Evaluate the Security of a messaging Application if Credentials or messages insecurely?

A) Check encryption, authentication, Storage Security and Access Controls.

17) A web Application is Vulnerable to SQL injection How would You Evaluate its Severity?

A) Check whether it can Expose, modify or delete Sensitive database Information.

18) How would you determine whether a web Application vulnerability is Critical or Low risk?

A) Evaluate Exploitability, Affected data, Privileges, and Business Impact.

19) How would you Evaluate a mobile Application using mobile?

A) Use MobSF to identify insecure Storage permissions, exposed Components, and hardcoded Secrets.

20) A mobile Application requests unnecessary Permission How would you Evaluate Risk?

A) Unnecessary Permissions can Expose Sensitive User Information and Create Privacy Risks.

SX How would you Evaluate the Risk of hardcoded API Keys or Passwords?

Checks whether the Credentials Can Provide unauthorized Access to Resources...

22) IF the Same Vulnerability is Found to web and mobile Application how would You Compose the Impact?

A) Compose Exposure, affected users, Accessible data, and business Impact.

23) How would you select hacking Tools For windows Linux, web and Mobile Application?

A) Select Tools based on the target Platform and the Security testing Objective...

24) After Vulnerability exploitation, how would You Evaluate its Significance?

A) Verify the Result and determine what Access data or Impact was Achieved...

25) How would you Prioritize Vulnerabilities and prepare a Professional Security Report?

A) Fix Critical and high-Risk issues First and Report the Finding impact, evidence and Recommendation.
